HOW SUPPLIED: Product 55871- Dermatologic Solution TRESADERM Veterinary is supplied in 7.5-ml and 15-ml dropper bottles, each in 12-bottle boxes. Sheet (MSDS) contains more detailed occupational safety information. To report adverse effects in users, to obtain an MSDS, or for assistance call 1-888-637-

WARNING: For topical use in dogs and cats. Avoid contact with eyes. Keep this and all drugs out of the reach of children. The Material Safety Data

While systemic side effects are not likely with topically applied corticosteroids, such a possibility should be considered if use of the solution is extensive

denuded areas. The expression of pain may last 2 to 5 minutes. Application of Dermatologic Solution TRESADERM should be limited to periods not longer than one

The amount to apply and the frequency of treatment are dependent upon the severity and extent of the lesions. Five to 15 drops should be instilled in the ear twice

with dermatoses affecting other than the ear the surface of the lesions should be well moistened (2 to 4 drops per square inch) with Dermatologic

The triple-action treatment that’s effective, easy and beneficial to your business.
The underlying cause of a pet’s dermatosis can be difficult to diagnose. And while skin rashes and hot spots may seem like minor irritations to pet owners, they can actually have serious implications for the health of pets. TRESADERM makes treatment easy – even when the underlying cause is unclear. Here are some of the ways in which TRESADERM treats the conditions that can make your patients miserable:

**OTITIS EXTERNA**
- kills bacteria that cause otitis externa
- relieves itching
- controls secondary infections

**FOCAL PYODERMA**
- kills pathogens that cause focal pyoderma
- reduces inflammation
- eases pain and discomfort

**HOT SPOTS**
- cools hot spots
- reduces inflammation
- fights secondary bacterial and fungal infections

**Important Safety Information:**
TRESADERM is for topical use only in dogs and cats. On rare occasions, application of the product may result in erythema or discomfort in the treated area. Discomfort in the treated area can last from 24 hours to 48 hours.
TRESADERM is a true solution, not an ointment or a salve. That makes it easier to administer, with no clogging in the ear canal or clumping in an animal’s fur.

ANTIBACTERIAL
*neomycin sulfate* quickly kills bacteria that can cause otitis externa and common skin infections.
- not absorbed through skin
- rarely allergenic
- effective against gram-positive and gram-negative bacteria

ANTI-INFLAMMATORY
*dexamethasone*, a fast-acting corticosteroid, reduces inflammation and relieves pain and itching.
- acts as a potent steroid
- relieves pain
- quickly reduces swelling
- alleviates itching

ANTIFUNGAL
*thiabendazole* treats the most common causes of mycotic dermatoses.
- helps treat fungal skin conditions and otitis externa
- helps prevent fungal overgrowth when bacteria are eliminated
- effective against the three dermatophyte species that cause 99% of ringworm infections in dogs and cats

SECONDARY INFECTIONS DUE TO EAR MITES
- kills the opportunistic organisms that feed on ear mite infections
- relieves itching and discomfort

FLEA ALLERGY DERMATITIS
- fights pruritus
- allows affected area to heal
- helps prevent secondary bacterial infection

DERMATOPHYTOSIS (RINGWORM)
- controls the dermatophytes that can cause hair loss and scaly/crusty skin in dogs and cats
- effective against the three dermatophyte species that cause 99% of ringworm infections in dogs and cats

The underlying cause of a pet’s dermatosis can be difficult to diagnose. And while skin rashes and hot spots may seem like minor irritations to pet owners, they can actually have serious implications for the health of pets. TRESADERM makes treatment easy – even when the underlying cause is unclear. Here are some of the ways in which TRESADERM treats the conditions that can make your patients miserable:

TRESADERM® (thiabendazole-dexamethasone-neomycin sulfate)

Important Safety Information:
TRESADERM is for topical use only in dogs and cats. On rare occasions, application of the product may result in erythema or discomfort in the treated area. Discomfort in the treated area can last from 24 hours to 48 hours.
Microsporum species of the genera already established mycotic skin disorders, or otoacariasis caused by Otodectes cynotis. The principal etiologic agents of dermatomycoses in dogs and cats are Staphylococcus aureus and Proteus vulgaris. The efficacy of neomycin as an antibacterial agent, with activity against both gram-negative and gram-positive pathogens, is well documented. Detailed studies in various laboratories have verified the significant activity thiabendazole displays against the important dermatophytes. Dexamethasone, a synthetic adrenocorticoid steroid, inhibits the reaction of connective tissue to injury and suppresses the classic inflammatory manifestations of skin disease. The formulation for TRESADERM combines these several activities in a complementary form for control of the discomfort and direct treatment of dermatitis and otitis externa produced by the above-mentioned infectious agents. DOSAGE AND ADMINISTRATION: Prior to the administration of Dermatologic Solution TRESADERM, remove the ceruminous, purulent or foreign materials from the ear canal, as well as the crust which may be associated with dermatomycoses affecting other parts of the body. The design of the container nozzle safely allows partial insertion into the ear canal for ease of administration. The amount to apply and the frequency of treatment are dependent upon the severity and extent of the lesions. Five to 15 drops should be instilled in the ear twice daily. In treating dermatomycoses affecting other than the ear the surface of the lesions should be well moistened (2 to 4 drops per square inch) with Dermatologic Solution TRESADERM twice daily. The volume required will be dependent upon the size of the lesion. Application of TRESADERM should be limited to a period of not longer than one week. PRECAUTIONS: On rare occasions dogs may be sensitive to neomycin. In these animals, application of the drug will result in erythema of denuded areas. The expression of pain may last 2 to 5 minutes. Application of Dermatologic Solution TRESADERM should be limited to periods not longer than one week. While systemic side effects are not likely with topically applied corticosteroids, such a possibility should be considered if use of the solution is extensive and prolonged. If signs of salt and water retention or potassium excretion are noticed (increased thirst, weakness, lethargy, oliguria, gastrointestinal disturbances or tachycardia), treatment should be discontinued and appropriate measures taken to correct the electrolyte and fluid imbalance. Store in a refrigerator 36°-46°F (2°-8°C). WARNING: For topical use in dogs and cats. Avoid contact with eyes. Keep this and all drugs out of the reach of children. The Material Safety Data Sheet (MSDS) contains more detailed occupational safety information. To report adverse effects in users, to obtain an MSDS, or for assistance call 1-888-637-4251. HOW SUPPLIED: Product 55871- Dermatologic Solution TRESADERM Veterinary is supplied in 7.5-ml and 15-ml dropper bottles, each in 12-bottle boxes.
